Continuation of 5, does NOT place the application in condition for allowance because: Applicant argues that Carollo does not teach a movable cutter. However, attention is drawn to Figure 4, #16 of Carollo which illustrates a cutter which operates in the same manner as applicants'; the dough is pinched and cut between two dull surfaces wherein one is movable (#16). Applicant argues that Mackowecki does not teach pinching and cutting. However, Mackowecki clearly illustrates this action in Figure 5. Applicant also argues that Mackowecki and and Carollo do not teach cutting a "single" dough sheet. However, the claims do not include this limitation. Regardless, a "single" dough sheet quite often can have multiple layers, for instance the layered dough sheet used to make croissants, with butter or lard between the layers. In addition, MAckowecki teaches a dough sheet which is pinched and cut (Figure 5, 26), as does Carollo (Figure 6, 14). Applicant argues that Mackowecki does not teach different geometries at its perimeter. However, Mackowecki clearly teaches an outer periphery (#39) with a different geometry from the rounded, inner periphery (#41) as viewed in the radial illustration of Figure 5. The previously cited rejections of the Final Rejection, paper no. 17, are still relied upon for the previously cited reasons. .
